

Observation : shower covered in strange green slime

Control : the half of the shower sprayed with water.

IU : spraying of coconut juice / treating the shower with coconut juice

DV : the presence of green slime  
(@absence)

Conclusion : coconut juice is not effective in removing green slime. Barney's claim is rejected.

Control grp : Group B that was not given the special juice

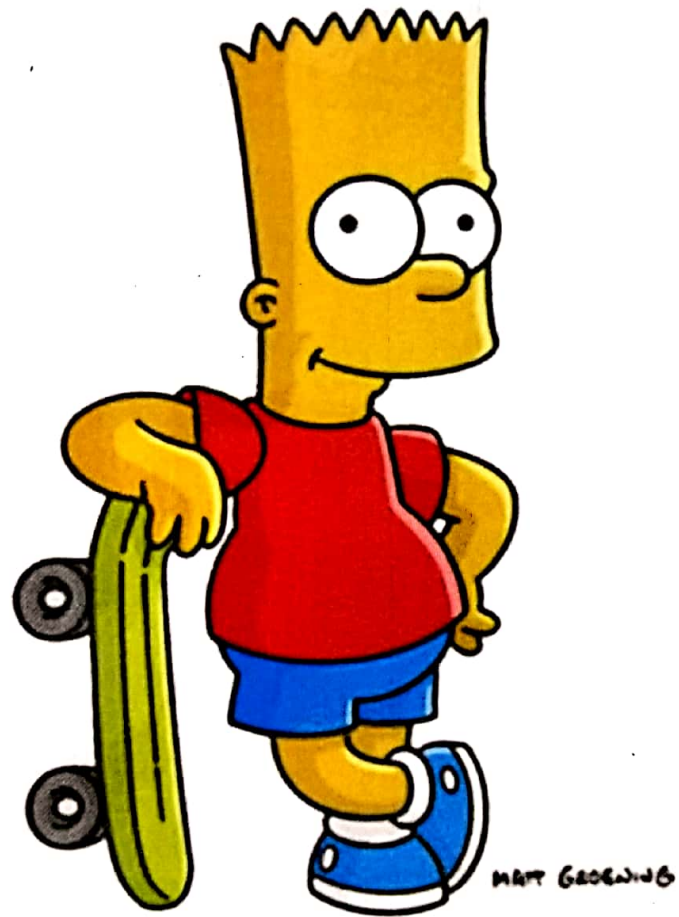

IV : (drinking) the special juice

DV : the productivity of workers

Conclusion : The special juice does not help in improving the workers' productivity. His hypothesis is rejected.

Improvement :

- different types of tasks
- etc.

Control : mice that are not exposed to radionuclides

IU : exposure to radionuclides

DU : strength of mice

conclusion : The difference is not significant, so  
Bart's hypothesis cannot be proven.

Improvement

- longer exposure period (time)
- more mice (bigger sample group)
- etc.

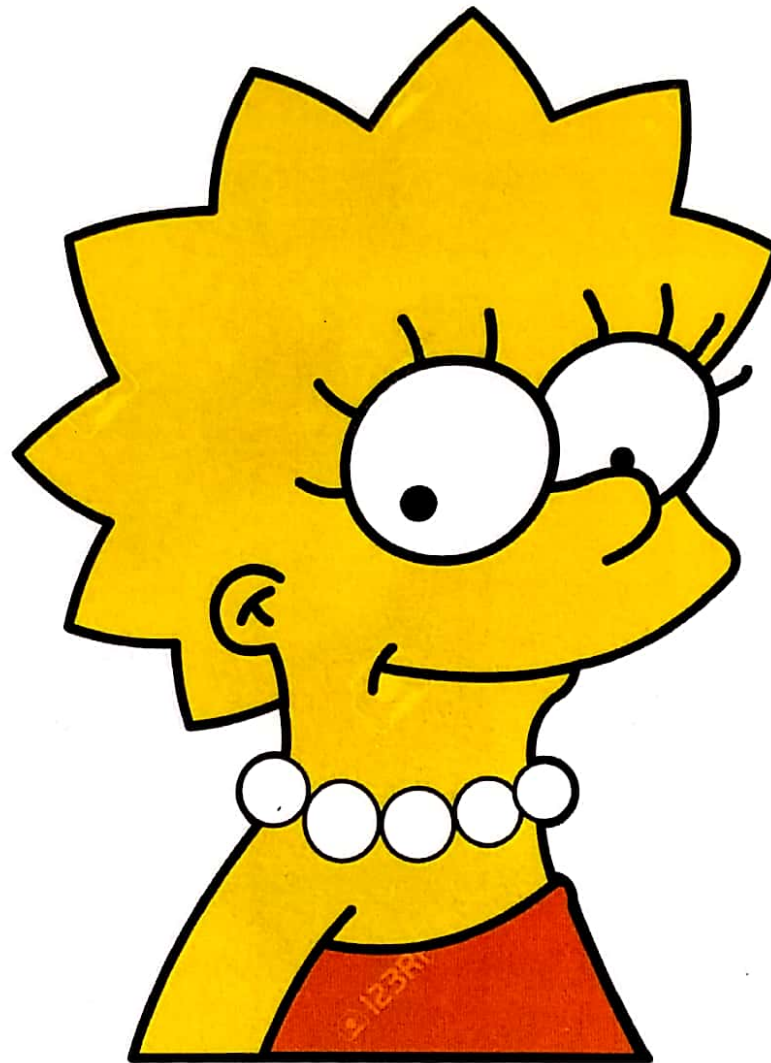

Control : A-sprinkled with the original powder

IU : (different) types of itching powder

DV : length of time for itchiness

Conclusion : The new itching powder causes the itchiness to last 15 minutes longer, which is 50%. The claim is proven.

IV : the application of Rogooti

DV : the speed of hair growth

control : the group/member without Rogooti  
(not applying)

①  
only water is applied /used
